The Department of Commerce (PG)

Presents

COMMERCE

CAFÉ

EDITORS DESKTOP

Commerce café is a thought that has been enduring in mind and with great effort it has been translated into veracity; we now are back with a revitalizing edition. Commerce Café provides a snapshot of the various activities and advancements for all associated with Department of Commerce (PG).

This Department e-magazine will definitely help us to showcase the activities that are happening in the department and provide a platform for exposing the merits and academic achievements of the students and faculty. Furthermore, it enhances the documentation culture of the institute.

We are sure the e-magazine would definitely create an impact in the minds of readers, by way of providing larger visibility and dimension of departments' progress and also that this e-magazine will encourage many more including students to use it as a platform to express their creativity. I sincerely hope that this edition makes for an interesting read.

LIFE SKILL EDUCATION

Department of Commerce (PG) in collaboration with The Centre for Life Skills Education (CLSE) of Kristu Jayanti College conducted training on Life Skills for the 1st Semester M.Com students over a span of four days from 19-22nd July 2016. Life skill training is an interactive, real-world readiness program for

youth. This capacity building training was focused on imparting 10 core life skills promoted by the World Health Organization .

These life skills represent the psycho-social skills that determine value behavior and include reflective skills such as problem-solving and critical thinking, to personal skills such as self-awareness, and inter-personal skills. The entire training was activity-based with an intense learning experience.

The Three days life skill education for the I year M.Com, M.Com FA and M,A Economics students of our college was started with Introduction to Life skill education on 19th July at 09.00 P.M in the Mini Auditorium of PG Block.

13th INDIA INNOVATION SUMMIT 2017

A group of 16 students from M.Com and M.Com FA were selected to be part of the INDIAN INNOVATION SUMMIT 2017 organized by the Confederation of Indian Industry (CII) which was held on the 13th and 14th of July, 2017.

Inaugural Session

The theme strives to address the spirit of nation building that lends to an ecosystem of innovation that is so critical to the future of the citizens in a digitally connected world.

Session 1— Learning to fly – Innovation by Teens

When many of us were in our teens, summer projects and work for science fairs meant visit to a photocopier :copy, cut and paste photos and graphics on colorful presentation boards. Our hobbies translated to playing cricket (or its equivalent, baseball they call it), watching it on a TV, or playing it on a computer. The answer mostly is a function of our time-and-space coordinates. While much hasn't changed today, we come across teenagers with creative, scientific minds that are building extraordinary

devices, revolutionary materials and renewable technologies that might just dent the universe and change the planet for better. What's fascinating about these developments is that the teens at innovation are not doing it for themselves. And, the trophies are coming in form of seed funds and venture capital. In this session, we proudly showcase and understand the phenomenal Gene why – and why not from across the world that's driving the Gen Y.

Session -2: Rise of Machines and Future of Human Labor

The rise of machine-driven intelligence solution impacts the human labour in various industries with varying degrees of scale. The machine-driven autonomous systems and assisted decision –support system challenge the low –value adding repetitive jobs that are on one end of the work spectrum. But at the same time, intrude into the high value diagnostic-driven domain specialization areas such as medicine and environment science. A hybrid workforce of machine and humans give rise to an existential of the future of human labor and intelligence. The session explores the trends, opportunities

Session- 5: Panel discussion on society and innovation

The panel explores the impact of different innovations on society, throwing light on beliefs, values and practices rooted in a nation's culture. The concept of identity, the need for privacy and the strife for equality are important social and cultural dimensions for building a national wealth around innovation. The cross- border nature of economic activities, the connected nature of digital societies and the local identity of sub cultures and ethnic groups presents a melting pot of divergent views on the role of innovation in society.

Session-6: Cure for All – A bridge too far?

One in three person diagnosed with the disease do not survive beyond five years. This leaves a little scope for developing insights about the disease, the possible diagnosis and what works best for who. For instance, let us say, a drug has been found to be effective in treating relatively rare of cancer. The medicine not only has a significantly higher success rate than medicine for other cancers but also far fewer side effects because its potency is trained on specific cancer cells. The rise of personalized/precision medicine is revolutionizing the way doctors and pharmaceutical companies approach diseases. Using genetic sequencing, medical professionals are now able to separate people with similar symptoms into far narrower groups and target medicines at them. Which could perhaps translate into: the doctor cures, the self-heals

Session – 3: All systems digital – A cashless move

The digital economy is disrupting the analog world by moving cash into the digital currency form. This is driving rural india embrace the digital world with mobile phone, digital wallet and biometric identity. This opens on under served segment to main stream marketing and consumerism while contours of this new Indian both in term of aspiration and anxiety for celebrating inclusion while losing anonymity.

Session - 4: Great Expectations – Scaling the consumption economy

The ecommerce boom has resulted in several shifts in the business landscape anchored on convenience at first, later focusing an experience, bringing about consumer inclusion from non-metro and rural regions. Indian ecommerce has so far focused on customer acquisition, gross merchandise value (GMV) growth and scale, funded often through heavy discounts. Today the conversation shifts to opportunities and constraints impacting the sustainability of the ecommerce model . as an area driving growth for the India economy, scale and sustainability for eCommerce may be vital for the economy itself

Session- 7 : Learning to unlearn – A digital immigrant’s dilemma

For once we can believe that technology can change the world since education and learning industry has embraced technology. New skills and passion for constant learning are becoming increasingly rewarding. A new ecosystem is greatly impacting and, in some cases, redefining, established systems and institutions. In its report, understanding Knowledge societies, the United Nations describes knowledge economies as those societies in which information and the creation of knowledge have replaced industrial production as the main contributor to GDP. To multiply the wealth of nations, this session discusses how businesses and government can integrate ICT into their core processes to increase efficiency, expand the scope and reach their services and improved productivity.

Session – 8: Framing Innovation –A new state diplomacy

The innovation framework of a nation is at the core of wealth creation paradigm for any state. The need for policy enablement for public good and its balancing act with protecting competitiveness of the industry gives rise to many fissures in international relations. This clash of national interest with international trade results in clash of patents, trade policies and tax regimes and it is this fine act of diplomacy which drives the nation’s innovation framework. The session analyses the social, moral and legal aspects of this frameworks as well as the business imperatives to bring out an informed and unbiased view.

25th NATIONAL QUALITY SUMMIT, 2017

A group of 11 students from MCom and MCom FA who were selected to be part of the NATIONAL QUALITY SUMMIT organized by the Confederation of Indian Industry (CII) on the 25th and 26th of November, 2017.

Session 1 : “Make In India” through global practices- Robust Quality Engineering

Shin Taguchi is the son of the legendary quality thinker Genichi Taguchi. As a consultant and president of ASI consulting Group, he's one of the quality industry's most sought-after professionals. His client list includes General Motor corp, Hyundai Motors Co, Ford Motors co, Kodak, Texas instruments Inc. and Lexmark International inc. over the years, he's trained more than 25000 engineers worldwide in quality engineering, product and process optimization. Tagucji is a disciple of robust engineering, the practice of designing products to avoid future quality problems. He believes that the quality goal of companies should be to solve quality problems before the're created.

Session 2: Impacting quality of Life : Industry Perspectives

Indian industry is endeavoring to create a quality platform for its various services, so that the benefits can accrue to the common man effectively and efficiently. Indian industry has a critical role to enable creating an efficient and effective structure to achieve the National goal.

Session 3: Global Quality Trends - Best Practices

Achieving an optimal culture of quality requires assessment improvement, and integrating into the fabric of the organization. The panelists are the Award Administrators of various Global Awards bringing in varied insights from a international perspective.

Session 6: Vision 2030 – Quality Horizon

With industry coming into terms with industry 4.0 which currently is redefining the landscape of manufacturing and service industries, it is time to initiate the strategies for the expected and unexpected change drivers of the future. This session aims to bring insights from practitioners on how they envision the future and strategize to address the challenges.

Session 4: MSME – Fostering the Quality Creation and Development of Enterprises

The session talks about the challenges for the MSME in the view to enhance the capabilities to successfully address the challenges of the disruptive business models and technologies. This is could be addressed by collaborative working to leverage their expertise of OEMs and embarking on new technologies including digital platforms to make them innovative, competitive and agile.

5th INTERNATIONAL CONFERENCE

Emerging trends in Global Accounting, Finance and Taxation
